

Division Review

For the test, please know the following:

1. Basic division facts to 9×9 (eg. $56 \div 8 = 7$)
2. The halving method (eg. $72 \div 8 \rightarrow$)

3. Estimating and rewriting equations (eg. $239 \div 8 \rightarrow 240 \div 8 = 30$, therefore $239 \div 8$ is about 30)
4. Long Division using the Box/ Grid method both without and with remainders as R# and as decimals.
(eg. $246 \div 3 \rightarrow$)

|--|--|--|--|--|

5. Interpreting remainders and solving word problems using full sentences. (Eg. **Megan needs 157 cupcakes. Cupcakes come in packages of 6. How many packages does she need to buy?**
 $157 \div 6 = 26 \text{ R } 1$, therefore Megan needs to buy 27 packages otherwise she will be short one cupcake)
